Project Title: Instant Noodles Website

I'd like to build this website with several inner pages you can navigate to that tell the user more about specific popular instant noodles, such as Shin ramen and Cup Noodles. The main/landing page will have more general information on instant noodles, including the history and origin.

- **Home Page/Introduction** – Show more general information on instant noodles with a call to action and introduction paragraph detailing the history/origin of noodles: where noodles came from, how instant noodles were born and later popularized
- **Ingredients** - composition of instant noodles. What are common ingredients?
- **Production** - How are the ingredients manufactured and packaged? For instance, the noodles can be fried or dried. Some noodles have dried ingredients, such as dried vegetables and meat.
- **Various Brands** - mini 'archive' of popular brands.
- **Sources** – sources, such as the Wikipedia page and other images/visuals used.
